

Engineering Project Coordinator

National manufacturer of single element metal wall and roof panel systems is presently interviewing candidates interested in joining a growing technical support team based at our Connecticut corporate/manufacturing facility.

Responsibilities:

- Produce architectural metal wall and roof panel shop drawings; material cut lists; product submittal packages.
- Provide technical support to both Customer Service Representatives and Regional Sales Managers.
- Oversee product data detail creation and revisions.
- Assemble and coordinate project information from customers, sales representatives and technical staff.

Requirements:

- Knowledge of metal roof and wall cladding systems and building envelope technology desirable.
- Must be able to read and understand architectural and structural contract drawings and specifications.
- Minimum AutoCAD 2013 experience.
- Familiarity with metal panel manufacturing and processes helpful.
- Experienced in managing multiple tasks efficiently.
- Ability to work successfully within a team, as well as independently.
- Pre-employment drug screening.
- Some jobsite travel required.
- Reports to Technical Manager.

Benefits and 401K are offered.
